

Bartosz Kiwerski

Senior Software Developer

10 Bukowiecka, Warsaw, Mazowieckie, 03-893, Poland | bartoszkiewski@outlook.com | linkedin.com/in/bartosz-kiwerski | github.com/bartosz-kiwerski

PROFESSIONAL SUMMARY

Senior Software Developer with 8+ years of expertise architecting performance-first web applications from greenfield using SvelteKit and modern JavaScript ecosystems. Consistently delivers sub-second load times and excellent Core Web Vitals through strategic rendering decisions and design system ownership. Combines deep frontend craftsmanship with agentic AI development workflows to ship high-quality, accessible, SEO-optimized experiences at scale.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, HTML5, CSS3, Python, Node.js, SQL, Bash
- **Frameworks & Libraries:** SvelteKit, Svelte, Tailwind CSS, React, Vue, Angular, Next.js, NgRx, RxJS, Vitest, Playwright, Express.js, FastAPI
- **Frontend Technologies:** SSR, SSG, ISR, Edge Runtime, Web Vitals, Lighthouse, WebPageTest, RUM, Semantic HTML, Structured Data, Service Workers
- **UI/UX & Performance:** Core Web Vitals, Responsive Design, Accessibility WCAG, Design Tokens, Component Libraries, INP Optimization, CLS Prevention, LCP Acceleration
- **APIs & Web Services:** RESTful APIs, GraphQL, WebSockets, API Contract Design, OpenAPI, Kafka, RabbitMQ, Redis Streams
- **Databases:** PostgreSQL, MongoDB, Redis, DynamoDB, Elasticsearch
- **Cloud & DevOps:** AWS CloudFront, AWS S3, AWS ECS, Lambda@Edge, Cloudflare Workers, CI/CD Pipelines, Terraform, GitHub Actions
- **Version Control:** Git, GitHub Flow, Trunk Based Development, Pre-commit Hooks, Conventional Commits
- **Testing:** Vitest, Playwright, Jest, React Testing Library, Cypress, Unit Testing, E2E Testing, Integration Testing
- **Security:** OAuth 2.0, JWT, Role Based Access Control, Data Encryption, CSP, CORS
- **Containerization:** Docker, Docker Compose, Kubernetes, ECS

- **Messaging & Integration:** Kafka, RabbitMQ, Redis, Webhooks, Event Driven Architecture
- **IDE & Tools:** Cursor, Claude Code, VS Code, WebStorm, npm, pnpm, Vite, ESLint, Prettier
- **Others:** AI Agentic Workflows, ADRs, Technical Planning, Code Review Leadership, Design Systems

PROFESSIONAL EXPERIENCE

Senior Software Developer

Nov 2024 – Apr 2026

EG S/A

Remote

- Architected a performance first financial fraud detection dashboard from scratch using SvelteKit and Tailwind CSS to replace a sluggish React legacy system
- Defined the rendering strategy combining SSR for authenticated user dashboards and SSG for public marketing pages to achieve sub second load times across all routes
- Built a reusable component library with design token implementation that enforced consistent accessibility standards and reduced UI bugs by eliminating utility sprawl
- Integrated real time transaction monitoring through WebSocket connections and Redis streams to display fraud alerts with latency under two hundred milliseconds
- Owned Core Web Vitals optimization achieving LCP below two seconds and INP under two hundred milliseconds through code splitting and image optimization techniques
- Implemented comprehensive testing using Vitest for unit tests and Playwright for end to end testing covering critical user journeys across browser environments
- Established frontend tooling with ESLint, Prettier, TypeScript strict mode, and pre commit hooks that maintained code quality across a growing team of five developers
- Worked fluently with AI coding agents including Cursor and Claude Code to accelerate component generation while maintaining architectural standards through rigorous code reviews

Senior Software Developer

Jan 2022 – Nov 2024

EG S/A

Remote

- Led the migration of a document management platform from React and Next js to SvelteKit to improve performance metrics and developer experience for real estate transaction workflows
- Designed and implemented secure document generation capabilities for purchase agreements and closing packages with role based access controls across buyer seller and attorney interfaces
- Integrated DocuSign electronic signature workflows through REST APIs while building approval tracking systems that monitored document review and signature completion status in real time
- Built notification systems for pending signatures and closing deadlines using server sent events that reduced missed contingency deadlines by a measurable margin
- Created comprehensive audit trails capturing document creation access edits and signature events using PostgreSQL with JSONB fields for flexible event storage
- Implemented structured data and semantic HTML across all transaction workspaces to improve search engine visibility for public listing pages

- Collaborated with legal and compliance teams to ensure regulatory adherence while maintaining performance budgets through strategic image loading and resource prioritization
- Established testing standards with Vitest for unit tests covering store logic and Playwright for cross browser E2E tests of signature workflows

Software Developer

Mar 2020 – Dec 2021

EG S/A

Remote

- Built a property investment and mortgage management platform using Svelte and SvelteKit while integrating with backend Node.js services and PostgreSQL databases
- Developed responsive dashboards that displayed real time investment tracking data and automated mortgage processing workflows for financial analysts and end users
- Implemented state management using Svelte stores and runes to handle complex financial calculations across multiple dashboard components without performance degradation
- Created reusable form components with validation and error handling that processed high volume financial transaction data while maintaining accessibility standards
- Integrated with backend APIs to display real time mortgage application status and investment portfolio performance metrics through efficient data fetching strategies
- Worked closely with the security team to implement encrypted data handling using AES256 and OAuth 2.0 authentication for all financial data transactions
- Deployed frontend applications to AWS CloudFront and S3 with CI/CD pipelines that automated testing and deployment processes for every pull request

Junior Software Developer

Oct 2018 – Mar 2020

KMD Poland

Hybrid

- Developed frontend features for enterprise document management systems using Svelte and vanilla JavaScript while collaborating with senior engineers on architecture decisions
- Built reusable UI components following design specifications that were used across multiple internal applications serving thousands of daily users
- Implemented responsive layouts using CSS Grid and Flexbox that worked seamlessly across desktop tablet and mobile viewports for field agents
- Wrote unit tests using Vitest to ensure component reliability and participated in code review sessions that improved code quality standards across the team
- Integrated with REST APIs to fetch and display document metadata and status information using async/await patterns with proper error handling
- Used Git and GitHub flow for feature development creating pull requests with clear descriptions and addressing review feedback promptly
- Participated in Agile ceremonies including daily standups sprint planning and retrospectives while learning production deployment processes on AWS infrastructure

Junior Full Stack Developer

Apr 2018 – Sep 2018

- Assisted in building internal dashboard applications using Svelte for frontend and Express.js for backend API development as an entry level contributor
- Created reusable modal components and form inputs that maintained consistent styling across different sections of the document processing application
- Learned TypeScript fundamentals while converting existing JavaScript components to typed equivalents under the guidance of senior team members
- Implemented basic client side form validation and error messaging that improved user experience during document upload workflows
- Used Git for version control and participated in daily standup meetings to report progress and identify blocking issues early
- Worked with PostgreSQL databases to perform simple queries for displaying transaction history lists and document status information
- Shadowed senior developers during performance debugging sessions using Chrome DevTools and learned Core Web Vitals optimization techniques

EDUCATION

Master of Engineering - MEng, Information Technology Project Management

WIT Academy

2019 – 2021

Bachelor of Engineering - BE, Computer Science

Polish-Japanese Academy of Information Technology

2015 – 2019

CERTIFICATIONS

RxJS, NgRx Bottega IT Minds Issued Jun 2019
